Sequence 172 AA;

The invention relates to a gene encoding scytalone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the Scytalone dehydrogenase amino acid sequence.

Claim 7; SEQ ID NO 4; 50pp; Japanese.

Gene encoding for scytalone dehydrogenase (SCDH), useful for SCDH inhibitors and evaluating sensitivity to them.

for screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local Similarity
                                                                                                                                                                                                                             The invention relates to a gene encoding scytalone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the
                                                                                                                                                                                      Sequence 172 AA;
                                                                                                                                                                                                                                                                                                                                                           Claim 1;

                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                               CC PAH84373 to AAH84499 represent Escherichia coli growth and proliferation CC related DNA sequences (I). AAH84500 to AAH84670 encode the E. coli growth CC and proliferation related proteins given in AA899078 and AA698830 to CAA698999. (I) can be used as potential targets for the generation of new CC antimicrobial agents, and for identification of compounds which interact with the gene products of (I). In addition the expression of (I) and the purification of the proteins, the purified proteins can be used to CC generate reagents and screen small molecule libraries or other candidate CC compound libraries for compounds that can be further developed to yield CC compund libraries for compounds. In addition, nucleic acid probes CC complementary to (I) that are specific for particular species of microorganisms can be used to identify particular microorganism species in clinical specimens, therefore, providing a rapid and dependable method by which to identify the causative agents of a bacterial infection. Also, antibodies generated against proteins translated from mRNA transcribed from proliferation-required sequences can also be used to screen for generatic microorganisms that produce such proteins in a species-specific manner. AAH84371 and AAH84670 represent sequencing primers used in the CC used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                        Sequence 98 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAG98943;

```
The present invention describes substantially purified human proteins (referred to, as open reading frame, ORFX, where X is 1-11491 (see Table 1 CC in the specification). ABN15762 to ABN27752 encode the human ORFX CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX associated CC disorder in humans, and in the manufacture of a medicament for treating a sequence of a medicament for treating a sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, CC psoriasis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, disorders haemorrhage, CC transplantation, cardiovascular diseases, disorders, infectious disease, autoimmune throiditis, myasthenia gravis, graft-versus-host disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host comparative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from comparative disorders, or periodontal disease, and for gut proteins are also compared to the printed specification, but was obtained in electronic format directly from WIPO at fib. wipo.int/pub/published_pct_sequences

                                                                                  Comprising the recombinant DNA construct and method of producing a crop plant control as maize or soybean. The method of producing a transformed plant is a crop plant control as maize or soybean. The method of producing a transformed plant control as maize or soybean. The method of producing a transformed plant control as compared property comprises transforming a plant with the control of property comprises transformed plant, where the control of the recombinant DNA construct is useful for improving plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, contracted to herbicides, extreme osmotic conditions, pathogens or pests, contreased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or content, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress composition. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not composed plant from USPFO at sequence data for this patent did not composed plant from USPFO at sequence data for this patent did not composed plant growth supposed plant for the printed specification but was obtained in electronic composed plant sequence data for this patent did not composed plant growth sequence content in the sequence data for this patent did not composed plant growth sequence content in the sequence data for this patent did not composed plant growth                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; pathogen tolerance; plant growth regulator; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; into the property of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADS43113 standard; protein; 187 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polyneptide from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

                                                                                                                                                     The present sequence is one of a series of outer membrane proteins (ARE60274-ARE60310) derived from cat Chlamydia. The present invention relates to a 1166239 base nucleic acid sequence comprising the genome of cat Chlamydia (AEE60206) or a 7552 base sequence comprising a Chlamydia (AEE602077). Also claimed are cat Chlamydia proteins comprising: inclusion body membrane proteins (AEE60208-AEE60273); outer membrane proteins (AEE60204-AEE60210); type-3 secretion proteins (AEE60311). AEE60310); type-3 secretion proteins (AEE60311); acretins (AEE60310); type-3 secretion proteins (AEE60311). AEE60310); highly antigenic proteins (AEE60339-AEE60339-); heat shock proteins (AEE60313-AEE60393-). AEE60300); and proteins (AEE60335-AEE60392); heat shock proteins (AEE60393-AEE60393-). AEE60011-AEE60393-AEE60392); heat shock proteins (AEE60393-AEE60393-). Probes which target these nucleic acid or protein (AEE60401-AEE60526). Probes which target these nucleic acid or protein (AEE6041-AEE60526). Probes which target these nucleic acid or protein (AEE60312-AEE60310); and proteins which target these nucleic acid or protein (AEE60312-AEE60310); and proteins which target these nucleic acid or protein (AEE60310-AEE60310); and proteins which target these nucleic acid or protein or base sequence determination, where the nucleic acid hybridization or base sequence determination or Southern hybridization process. Such screening methods are useful for detecting conjunctivitis, preumonia and bronchitis, based on the presence or absence of alteration in a gene (presence or absence of deletion or the point mutation). The disclosed sequences are also useful in producing vaccines for provention of chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local Similarity 100.0%; Matches 7; Conservative

The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful preparing a vaccine composition against Klebsiella pneumoniae.

                             The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, gastrointestinal disorders, muscular disorders such as neural disorders, gastrointestinal disorders, The polymucleotide sequences of the invention are also useful disorders. The polymucleotide sequences of the invention are also useful disorders and polymucleotide sequences of the invention are also useful in gene therapy. AAU21568-AAU21851 represent the novel human neoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnose

                                                                                                                 밁
                                                                                                                                                                                                                                                                            AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and cancer metastases of haematopoietic-derived cells. AAK64703 concers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 capresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    comprising the nucleic acid (expressing the protein), an isolated antibody that binds specifically to the isolated polypeptide, preventing, treating or ameliorating a medical condition, diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, identifying a binding partner to the polypeptide, identifying an activity in a biological assay, and the gene corresponding to the cDNA sequence. The polypeptides, polynucleotides and antibodies are useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating medical conditions such as hyperproliferative diseases or cancer, autolumnune disorders (e.g. diabetes, rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis or haemolytic anaemia), haematopoietic or haematologic disorders (e.g. anaemia or thrombocytopaenia), allergic reactions including asthma or eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to one of 238 disclosed human neoplastic disease-associated polypeptides encoded by 171 disclosed cDNA sequences (including their domains, epitopes, full-length proteins, allelic variand or species homologues). Also included are there encoding nucleic acids, recombinant vector comprising the nucleic acid, a recombinant host cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated human neoplastic disease-associated polypeptides and polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-DEC-2000;

cc polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide cftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for comotic conditations, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for moducing galactomannan, cc lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                       Query Match

                                    SEQ ID NO 446; 213pp; English.
```

The invention relates to a transgenic plant comprises a recombinant polynucleotide having a sequence or its complementary exquence comprising a sequence encoding a polypeptide, that initiates transcription (i.e. a transcription factor) from Arabidopsis, Soybean, Rice, Rape or Corn, comprising any of the sequences appearing as AD00158 constitutive, inducible or tissue-specific promoters and a recombinant complynucleotide described above), a bost cell comprising a transgenic plant to grow a progeny plant, an expression cassette (comprising a factor that is modulated by or interacts with a polypeptide encoded by the polypucleotide sequence and identifying a transgenic plant plant is useful for producing a modified plant having a modified trait, identifying a factor that is subject to a regulatory effect of any of the polypucleotide sequence that is subject to a regulatory effect of any of the polypucleotide sequence that is subject to a regulatory effect of any of the polypucleotide sequence to calcidate to the polypucleotide sequence to the polypucleotide sequence to desire to be polypucleotide sequence to calcidate the polypucleotide sequence to polypucleotide to expression of continuity, reduced sensitivity to abscrize interact, tolerance to salt, an altered succeptibility to polypucleotide sequence to early the polypucleotide sequence to early the polypucleotide secuence to the p sterols, upregulation of genes involved in secondary metabolism, incrin root anthocyanins, increase in plant anthocyanins, and alteration light response or shade avoidance. The present sequence represents a thalecress transcription factor of the invention. increase ä

Sequence 258 AA;

GENERAL INFORMATION:

APPLICANT: Heinemann Ph.D., James R.

APPLICANT: Hollmann Ph.D., Michael Nan

APPLICANT: Hollmann Ph.D., Jan E.

ITITLE OF INVENTION: METHODS

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:

ADDRESSEE: Pretty, Schroeder, Brueggemann & Clark

STREET: 444 So. Flower St., Suite 2000

CITY: Los Angeles

STATE: California

COUNTRY: United States

ZIP: 90071-2921

COMPUTER: JEM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION NUMBER: US/07/718,575

FILING DATE: 19910813

CLASSIFICATION NUMBER: 31192

REGISTRATION NUMBER: 31192

REGISTRATION NUMBER: 31192

REGISTRATION NUMBER: 31192

REGISTRATION NUMBER: 31192

REFERENCE/DOCKET NUMBER: 318962

TELECOMMUNICATION INFORMATION:

MAME: Reiter Ph.D., Stephen E.

REGISTRATION NUMBER: 31192

REFERENCE/DOCKET NUMBER: 31192

REGISTRATION NUMBER: 31192

REGISTRATION FOR SEQ ID NO: 4:

SEQUENCE CHARACTERISTICS:

LENGTH: 883 amnio acids

TYPE: AMINO ACID

TOPOLOSY: linear

HOLECULE TYPE: protein
